ECDC VAROITTA TRIPLAEPIDEMIASTA: COVID-19, INFLUENSSA JA RSV AIHEUTTAVAT MERKITTÄVÄÄ TERVEYDENHUOLLON KUORMITUSTA

12 December 2022

ECDC presents EU/EEA Member States with the following options for response:

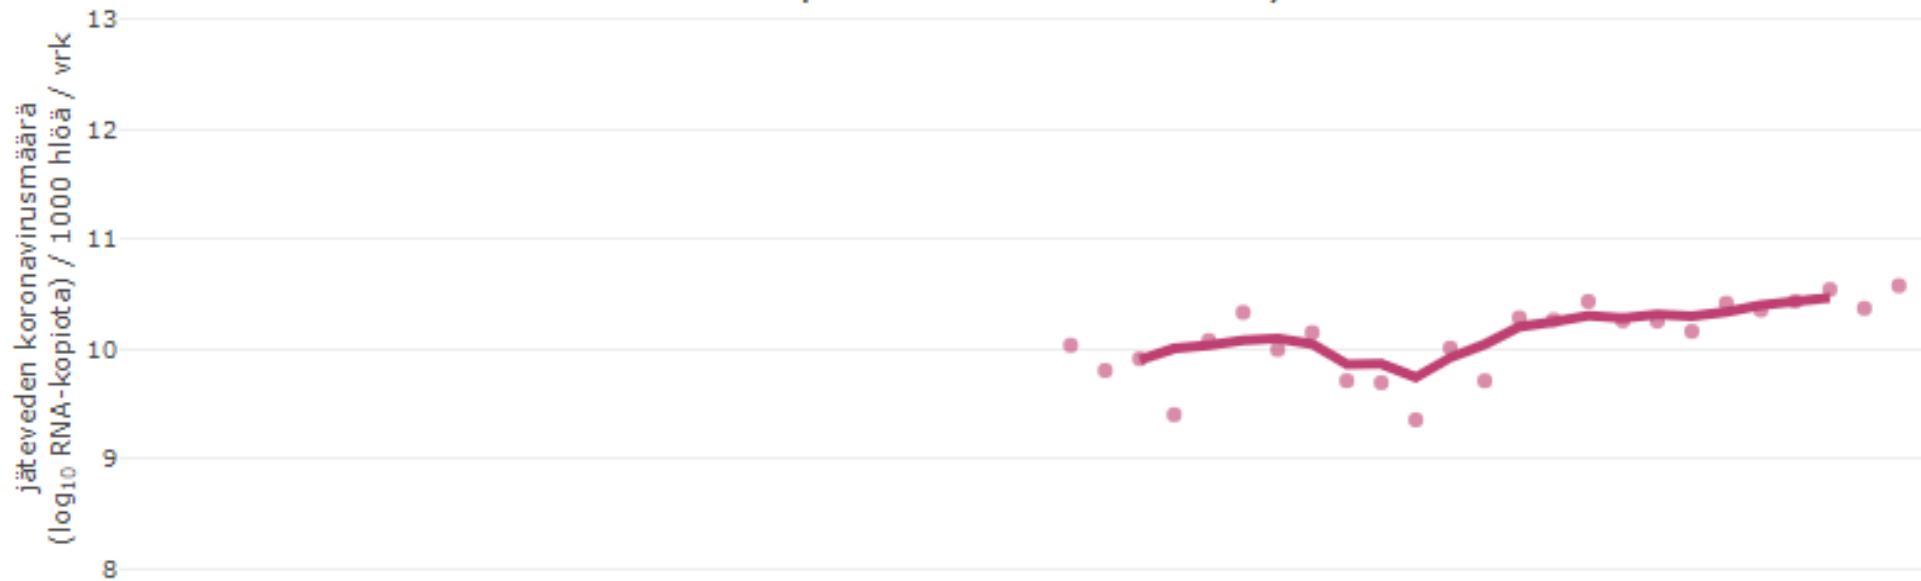

- Implement risk communication activities for the public including active promotion of vaccinations against seasonal influenza and COVID-19;
- Increase awareness among healthcare professionals to timely diagnose cases and enhance hospital preparedness to manage increased patient load in outpatient and inpatient settings. This is particularly important for paediatric hospitals and intensive care units, and long-term care facilities (LTCFs);
- Ensure RSV prophylaxis to high-risk infants in accordance with national guidelines;
- Implement appropriate infection prevention and control (IPC) measures based on the local epidemiological situation, particularly for vulnerable groups within healthcare facilities, including LTCFs;
- Promote good hygienic practices in the community and consider appropriate non-pharmaceutical interventions (NPIs), such as staying home when ill, good hand and respiratory hygiene including appropriate use of face masks, appropriate ventilation of indoor spaces, use of teleworking where possible, and avoiding crowded public spaces;
- Where possible, implement and improve surveillance of RSV and testing for respiratory pathogens.

SUOMI: JÄTEVESISEURANTA KORONA, KORKEALLA 16.12.2022

Koronaviruksen RNA-määrä jätevedessä ja laboratoriovarmistettut COVID-19-tapaukset
9 puhdistamon alueella yhteensä

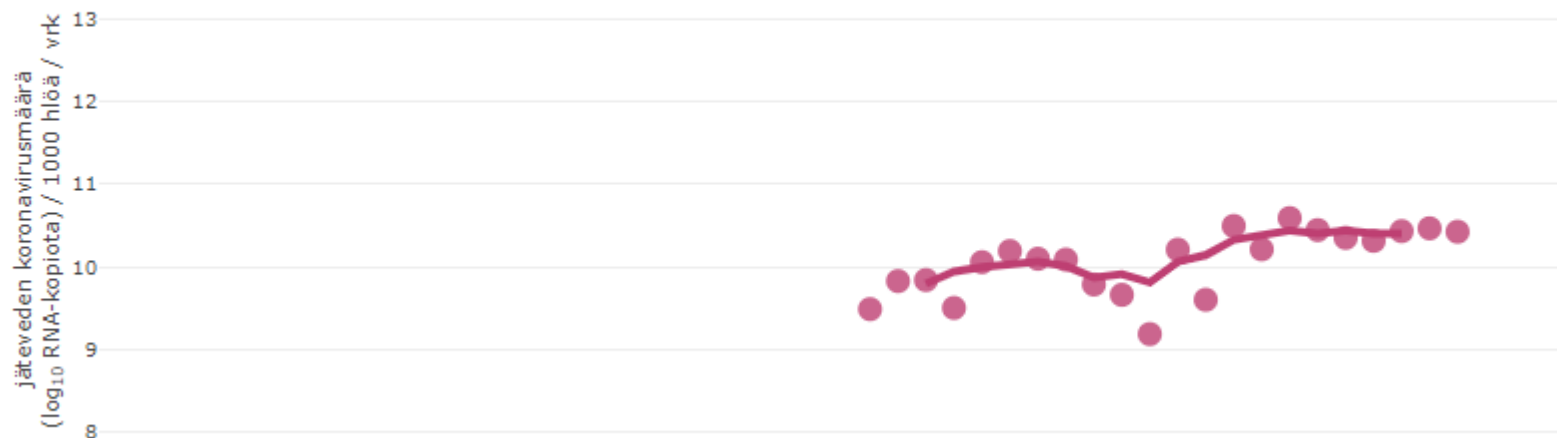

logaritminen ▼

The chart displays the daily number of deaths in Finland from March 2020 to January 2023. The y-axis represents the number of deaths (kuolemien lukumäärä) from 0 to 250. The x-axis represents the reporting date (Tilastointipäivä) from March 2020 to January 2023. The data shows three main waves of deaths: a small wave in mid-2020 peaking around 60 deaths; a second wave in late 2020/early 2021 peaking around 45 deaths; and a large, sustained wave starting in late 2021, peaking in late March 2022 at over 250 deaths per day, before declining and then rising again in late 2022.
